(54) Aqueous suspension concentrate

(57) The invention relates to an aqueous, concentrated suspension (SC) for crop protection active compounds which comprises

(a) 50 to 400 g/L of at least one crop protection active compound;

(b) 50 to 500 g/L of at least one adjuvant, which reduces the surface tension in the spray dilution 40 mN/m or less and does not promote the particle growth of the crop protection active compound;

(c) at least one surfactant selected from the groups (c1) and (c2):

(c1) 5 to 75 g/L of one or more non-ionic dispersants,

(c2) 10 to 100 g/L of one or more anionic dispersants,

(d) up to 150 g/L of one or more anti-freezing agents,

(e) up to 25 g/L of one or more defoamers,

(f) up to 25 g/L of one or more preservatives, and

(g) 200 to 800 g/L of water,

wherein the adjuvant (b) is selected from the group consisting of amine alkoxylates, polyoxyalkylene triglycerides, alkylpolyglycosides, alkenyl succinic anhydride derivatives, polyvinylpyrrolidones, perfluoroalkyl acids derivatives, and mixtures thereof;

and to the use of such a concentrate suspension as a pesticide.

EP 1 023 832 A1

Description

BACKGROUND OF THE INVENTION

[0001] This invention concerns an aqueous, storage stable suspension concentrate (SC) for crop protection active compounds, a method for the manufacture of such suspensions, and their use for combating pests.

[0002] As a rule inert ingredients must be used to bring crop protection active compounds, for example fungicidal compounds, into such a form that the user can apply them either as such or after dilution with water. The correct choice of suitable inert ingredients for the formulation often determines to a significant extent whether the active ingredient can display its full efficacy after application. When selecting suitable ingredients to insure the physicochemical stability of the formulation, it must be taken into account that not every active ingredient can be processed into any given formulation type without losses in stability and/or efficacy.

[0003] The efficacy of the active components can often be improved by addition of other ingredients such as adjuvants. An adjuvant is defined here as a substance which can increase the biological activity of an active ingredient but is not itself significantly biologically active. The adjuvant can either be included in the formulation or can be added to the spray tank together with the formulation containing the active ingredient.

[0004] In view of an easy and safe handling and dosing of these adjuvants by the end-user and in view of avoiding unnecessary packing material, it is desirable to develop concentrated formulations which already contain such adjuvants.

SUMMARY OF THE INVENTION

[0005] The present invention relates to an aqueous, concentrated suspension (SC) for crop protection active compounds which comprises

- (a) 50 to 400 g/L of at least one crop protection active compound;
- (b) 50 to 500 g/L of at least one adjuvant, which has the capability of reducing the surface tension in the spray dilution to 40 mN/m or lower and does not significantly promote the particle growth of the crop protection active compound in the stored SC;

- (c) at least one surfactant selected from the groups (c1) and (c2):

- (c1) 5 to 75 g/L of one or more non-ionic dispersants, and
- (c2) 10 to 100 g/L of one or more anionic dispersants,

- (d) up to 150 g/l of one or more anti-freezing agents,
- (e) up to 25 g/L of one or more defoamers,
- (f) up to 25 g/L of one or more preservative, and
- (g) 200 to 800 g/L of water,

wherein the adjuvant (b) is selected from the group consisting of amine alkoxylates, polyoxyalkylene triglycerides, alkyl-polyglycosides, alkenyl succinic anhydride derivatives, polyvinylpyrrolidones, perfluoroalkyl acids derivatives, mixtures thereof and mixtures with diluents. Another aspect of the present invention is a process for the preparation of such a SC which comprises

- (1) air-milling of 50 to 400 g/L of one or more crop protection active compounds (a) optionally in the presence of one or more anionic dispersants (c2), and/or a milling aid such as kaolin or silica, and
- (2) mixing all the components (a) to (g) in a dissolver.

[0006] Furthermore, the invention relates to a method for the control of pests at a locus which comprises diluting a SC according to the invention with water and treating the said locus with the obtained diluted formulation.

[0007] Those and other objects and features of the invention will become more apparent from the detailed description set forth hereinbelow.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS

[0008] It has now been found that, surprisingly, stable aqueous SC formulation comprising one or more crop protection active compounds (a) and one or more adjuvants (b) in combination with one or more non-ionic dispersants (c1) and/or one or more anionic dispersants (c2) and can be prepared.

[0009] The biological activity of the active ingredients (a) can be increased by including the adjuvants (b) in the spray dilution or directly in the formulation. However, according to the present invention the adjuvants (b) are incorporated into the concentrated formulation.

[0010] The term pests as used hereinabove and hereinbelow includes but is not limited to plant pathogens, insects and weeds.

[0011] In principle all crop protection active compounds can be used for the non-aqueous concentrated suspensions according to the invention. However, solid crop protection active compounds are preferred.

[0012] As a rule solid crop protection active compounds are used which have a low solubility in water. A solubility of less than 10 g/L, in particular less than 5 g/L in water is preferred.

[0013] The compositions of this invention can be applied to the plants or their environment with other active substances. These active substances (a) can be either fertilizers or agents which donate trace elements or other preparations which influence plant growth. However, they can also be selective herbicides, insecticides, fungicides, bactericides, nematocides, algicides, molluscicides, rodenticides, virucides, compounds inducing resistance into plants, biological control agents such as viruses, bacteria, nematodes, fungi and other microorganisms, repellents of birds and animals, and plant growth regulators, or mixtures of several of these preparations.

[0014] The active ingredients, which are provided in the form of the aqueous SC formulation according to the invention, include all suitable biologically active compounds for plant protection, preferably fungicides, herbicides, insecticides, acaricides, nematocides and repellents, in particular fungicides. Active ingredients which are solid at room temperature are preferred, in particular those with a melting point of higher than 50 °C.

[0015] Mixtures of different biologically active compounds can have a broader spectrum of activity than a single compound alone. Furthermore, these can exhibit a synergistic effect compared with the single active ingredients. In a preferred embodiment, the formulation of the present invention can be used with a mixture of active ingredients, in the case of mixtures one of the active ingredients can be dissolved in the continuous phase of the SC formulation according to the invention.

[0016] Preferred fungicides for use in the compositions of the present invention are the commercially available compounds selected from the group consisting of:

[0017] AC 382042, anilazine, azoxystrobin, benalaxyl, benomyl, binapacryl, biteranol, blastocidin S, Bordeaux mixture, bromuconazole, bupirimate, captan, carbendazim, carboxin, carpropamid, chlorbenzthiazol, chlorothalonil, chlorzoxinate, copper-containing compounds such as copper oxychloride, and copper sulfate, cycloheximide, cymoxanil, cyprofuram, cyproconazole, cyprodinil, dichlofluanid, dichlone, dichloran, diclobutrazol, diclofymet, diclomazine, diethofencarb, difenoconazole, diflumetorim, dimethirimol, dimethomorph, diniconazole, dinocap, ditallimfos, diithianon, dodemorph, dodine, edifenphos, epoxiconazole, etaconazole, ethirimol, etridiazole, famoxadone, fenapanil, fenamidone, fenarimol, fenbuconazole, fenfuram, fenhexamid, fenpiclonil, fenpropidin, fenpropimorph, fentin, fentin acetate, fentin hydroxide, ferimzone, fluazinam, fludioxonil, flumetover, fluquinconazole, flusilazole, flusulfamide, flutolanil, flutriafol, folpet, fosetylaluminium, fuberidazole, furalaxyl, furametpyr, guazatine, hexaconazole, IKF-916, imazalil, iminocladine, ipconazole, iprodione, isoprothiolane, iprovalicarb, kasugamycin, KH-7281, kitazin P, kresoxim-methyl, mancozeb, maneb, mepanipyrim, mepronil, metalaxyl, metconazole, methfluroxam, MON 65500, myclobutanil, neosozin, nickel dimethyldithiocarbamate, nitrothalisopropyl, nuarimol, ofurace, organo mercury compounds, oxadixyl, oxycarboxin, penconazole, pencycuron, phenazineoxide, phthalide, polyoxin D, polyram, probenazole, prochloraz, procymidone, propamocarb, propiconazole, propineb, pyrazophos, pyrifinex, pyrimethanil, pyroquilon, pyroxyfur, quinomethionate, quinoxifen, quintozene, spiroxamine, SSF-126, SSF-129, streptomycin, sulfur, tebuconazole, tectoalame, tecnazene, tetraconazole, thiaabendazole, thifluzamide, thiophanate-methyl, thiram, tolclofomethyl, tolyfluanid, triadimefon, triadimenol, triazbutil, triazoxide, tricyclazole, tridemorph, trifloxystrobin, triflumizole, triforine, triticonazole, validamycin A, vinclozolin, XRD-563, zarilamide, zineb, ziram.

[0018] In addition, the formulations according to the invention may contain at least one compound of the following classes of biological control agents such as viruses, bacteria, nematodes, fungi, and other microorganisms which are suitable for the control of insects, weeds or plant diseases, or to induce host resistance in the plants. Examples of such biological control agents are: *Bacillus thuringiensis*, *Verticillium lecanii*, *Autographa californica* NPV, *Beauveria bassiana*, *Ampelomyces quisqualis*, *Bacillus subtilis*, *Pseudomonas fluorescens*, *Steptomyces griseoviridis* and *Trichoderma harzianum*.

[0019] Moreover, the formulations according to the invention may contain at least one chemical agent that induces the systemic acquired resistance in plants such as, for example, isonicotinic acid or derivatives thereof, 2,2-dichloro-3,3-dimethylcylopropylcarboxylic acid or BION.

[0020] Also preferred compositions can include derivatives of benzoylbenzenes which are disclosed, for example, by European Patent Applications EP 0 727 141, in particular the compounds of formula I

wherein

R^1 represents a halogen atom, an optionally substituted alkyl, alkanoyloxy or alkoxy group; or a hydroxy group.

R^2 represents a halogen atom, an optionally substituted alkyl group.

R^3 represents a halogen atom or an optionally substituted alkyl group,
m is 0 or an integer of 1 to 3;

R^4 independently represents a halogen atom, an optionally substituted alkyl or alkoxy group or a nitro group;

R^5 represents an optionally substituted alkyl group;

R^6 represents a halogen atom, a cyano, carboxy, hydroxy or nitro group or an optionally substituted alkyl, alkoxy, alkenyl, alkylthio, alkylsulphenyl, alkylsulphonyl or amino group;

R^7 represents a halogen atom or a nitro group, an optionally substituted alkyl, alkoxy, alkenyloxy, alkynyloxy, alkylthio, cycloalkyl, cycloalkyloxy, aryloxy group; and
n is 0, 1 or 2.

[0021] Preferred are those compounds of formula I wherein R^1 represents a, chlorine atom or a methyl, methoxy or a hydroxy group and R^2 represents a chlorine atom or a methyl group; R^3 represents a halogen atom; R^4 and R^5 each represents a methyl group; and R^6 and R^7 each represent a C_{1-6} alkoxy or a benzyloxy group; m is 0 or 1 and n is 1.

[0022] Particularly preferred are those compounds of formula I wherein

R^1 represents a methoxy group; most preferred are the following benzoylbenzenes:

6'-butoxy-2,6-dichloro-4',5'-dimethoxy-2'-methylbenzophenone (coded BB-1); 2,6-dichloro-4',5'-dimethoxy-6'-(2-fluorobenzyloxy)-2'-methylbenzophenone (coded BB-2); 6'-benzyloxy-4',5'-dimethoxy-2,6-dimethyl-2'-methylbenzophenone (coded BB-3); and 3-bromo-2',6-dimethyl-2,4',5',6'-tetramethoxybenzophenone (coded BB-4).

[0023] Preferred herbicides are the commercially available compounds selected from the group consisting of:

2,4-D, 2,4-DB, 2,4-DP, acetochlor, acifluorfen, alachlor, alloxidim, ametrydione, amidosulfuron, asulam, atrazin, azimsulfuron, benfuresate, bensulfuron, bentazon, bifenox, bromobutide, bromoxynil, butachlor, cafenstrole, carfentrazone, chloridazon, chlorimuron, chlorpropham, chlorsulfuron, chlortoluron, cinmethylin, cinosulfuron, clomazone, clopyralid, cyanazin, cycloate, cyclosulfamuron, cycloxydim, daimuron, desmedipham, di-methazone, dicamba, dichlobenil, diclofop, diflufenican, dimethenamid, diithiopyr, diuron, eptame, esprocarb, ethiozin, fenoxa-prop, flazfop-M-isopropyl, flazfop-M-methyl flazfop, flumeturon, fluoroglycofen, fluridone, fluroxypyr, flurtamone, fluthiamid, fomesafen, glufosinate, glyphosate, halosafen, haloxyfop, hexazinone, imazamethabenz, imazamethapyr, imazamox, imazapyr, imazaquin, imazethapyr, ioxynil, isoproturon, isoxaben, isoxaflutole, lactofen, MCPA, MCPP, mefenacet, metabenzthiazuron, metatoluron, metazachlor, methidimuron, metolachlor, metribuzin, metsulfuron, molinate, nicosulfuron, norflurazon, oryzalin, oxadiargyl, oxasulfuron, oxyfluorfen, pendimethalin, picloram, pretilachlor, propachlor, propanil, prosulfocarb, pyrazosulfuron, pyridate, quinclac, quinclorac, quizalofopethyl, sethoxydim, simetryne, sulcotriene, sulfentrazone, sulfosate, terbutryne, terbutylazin, thiameturon, thifensulfuron, thibencarb, tralkoxydim, triallate, triasulfuron, tribenuron, triclopyr, trifluralin.

[0024] Furthermore preferred are the derivatives of aryloxy-picoline amides which are disclosed, for example, by European Patent Application EP-A-0 447 004, in particular, N-(4-fluorophenyl) 6-(3-trifluoromethylphenoxy)-pyrid-2-ylcarboxamide having the proposed common name picolinate.

[0025] Examples of insecticidal compounds are alpha-cypermethrin, benfuracarb, BPMC, buprofezin, carbosulfan, cartap, chlorfenvinphos, chlorpyrifos-methyl, cycloprothrin, cypermethrin, estenvalerate, ethofenprox, fenpropathrin, flucythrinate, flufenoxuron, hydramethylnon, imidacloprid, isoxathion, MEP, MPP, nitenpyram, PAP, permethrin, propaphos, pymetrozine, silafluafen, tebufenozide, teflubenzuron, temephos, terbufos, tetrachlorvinphos and triaza-

mate.

[0026] Liquid active ingredients such as for example fenpropimorph can be formulated according to the present invention by adsorbing the active ingredient onto a carrier.

[0027] As a rule the non-aqueous SC according to the invention comprises by 50 to 400 g/L, preferably 75 to 375 g/L, in particular 80 to 350 g/L of one or more crop protection active compounds.

[0028] The adjuvants (b) are preferably selected from the group consisting of amine alkoxylates, alkylpolyglycosides, alkenyl succinic acid derivatives, polyvinylpyrrolidones, perfluoroalkyl acid derivatives, in particular perfluoro(C₆₋₁₈)alkylphosphonic acids, perfluoro(C₆₋₁₈)alkyl-phosphinic acids, perfluoro(C₃₋₂₀)alkyl esters of polymeric carboxylic acids, mixtures thereof and mixtures with diluents.

[0029] The aliphatic moieties of the amines ethoxylates may be straight-chained or branched. Preferably these compounds correspond to a oligomer of the following formula

in which

n is an integer from 9 to 20, in particular 12 to 18;

x is an integer from 2 to 14, in particular 2 to 10.

[0030] Of particular interest are those polyalkoxylated aliphatic amines, which are liquids at temperatures down to at least 20°C having a viscosity of 100 to 1000 mPa · s at 25 °C. The compounds which are commercially available under the trademark Bero[®] (Akzo-Nobel), in particular Bero[®] 381 has been proven to be especially advantageous.

[0031] The alkylpolyglycosides (APG) are obtainable from an acid-catalyzed Fischer reaction of starch or glucose syrups with fatty alcohols, in particular C₈₋₁₈ alcohols. Most preferred are C₈₋₁₀ and C₁₂₋₁₄ alkylpolyglycosides having a degree of polymerization of 1.3 to 1.5., in particular 1.4 or 1.5. These APGs are commercially available for example under the tradenames Agrimul[®] and Glucopon[®], which are APGs diluted with water, in particular Glucopon[®] 215CSUP or Glucopon[®] 600CSUP from Henkel KGaA or Atplus[®]430, Atplus[®]435, Atplus[®]450, Atplus[®]469, which are APGs diluted with hydrotrope agents, from Uniqema (formerly ICI Surfactants).

[0032] Preferred polyoxyalkylene triglycerides are as a rule obtainable by alkoxylation of triglycerides. The alkoxylation of triglycerides results in mixtures of compounds with one to three glyceride side chains having 9 - 24, preferably 12 - 22 and in particular 14 - 20 C-atoms, in particular with ethyleneoxide. The aliphatic moieties of the said triglycerides may be straight-chained or branched. Preferably these compounds correspond to mixed oligomers resulting from the alkoxylation of castor or canola oil. Most preferred are castor and canola oil ethoxylate having 20 to 50, in particular 30 or 40 ethyleneoxide units, which are commercially available under the tradename Eumulgin[®], in particular Eumulgin[®] RT40.

[0033] Preferred alkenyl succinic acid derivatives are compounds of formula

or salts thereof, in which

R represents a C₄₋₁₈ alkyl group, in particular a hexyl, heptyl or dodecyl group;

X represents O or N(C₁₋₆ alkyl);

P¹ and P² each represent a polymer back bone selected from the formulae (1) and (2);

- [0043] Most preferred are the Pluronic®-type block-copolymers, which are available from BASF AG, in particular Pluronic® PE 10500.
- [0044] As a rule the aqueous SC according to the invention comprises 5 to 75 g/L, preferably 7.5 to 40 g/L, in particular 8 to 30 g/L of one or more non-ionic dispersants (c1).
- 5 [0045] The anionic dispersant (c2) is as a rule an alkali or earth alkali sulfonate, which includes also concentrated mixtures of such an alkali or earth alkali sulfonate with a polar diluent such as an alcohol or an aromatic hydrocarbon, preferably butanol, 2-ethylhexanol or Solvesso® 200. Such a mixture preferably consists of 40 to 90 wt.-% of at least one alkali or earth alkali sulfonate and 10 to 60 wt.-% of an organic diluent. Ammonium, alkali and earth alkali alkylbenzene sulfonates are preferred, in particular calcium dodecylbenzene sulfonates such as Rhodocal® 70/B (Rhodia, formerly Rhône-Poulenc) or Phenylsulfonat CA100 (Clariant GmbH, formerly Hoechst AG) or isopropylammonium dodecyl benzene sulfonate such as Atlox® 3300B (Uniqema). In a particularly preferred embodiment of this invention the anionic dispersant is an alkylnaphthalene sulfonic acid formaldehyde condensate such as Morwet® D425 (Witco Corporation, USA).
- 10 [0046] As a rule the aqueous SC according to the invention comprises 10 to 100 g/L, preferably 10 to 80 g/L, in particular 15 to 75 g/L of one or more anionic dispersants.
- [0047] The appropriate relative amounts of active ingredient (a) and the adjuvant (b) lie, in accordance with the invention, between 1:0.5 and 1:100, preferably between 1:0.75 and 1:10 and, in particular, between 1:1 and 1:5. In general and within certain limits, the pesticidal efficacy can be enhanced to a higher degree by the addition of larger amounts of the adjuvant (b) as is shown in the experimental results described below.
- 20 [0048] Recommended doses for various applications are known for the crop protection active compounds (a) where the efficacy can be enhanced in accordance with the invention. Addition of the adjuvants suggested here can (depending on the active ingredient, the adjuvant and their amounts) reduce the amount of active ingredient per hectare required in these recommendations by half or more, whereby it becomes possible to control additional diseases at reasonable doses.
- 25 [0049] An important advantage is the rapid onset and the high persistency of activity on use of the new additives. This enlarges the period for application of the pesticide and makes its use more flexible.
- [0050] The pesticidal formulations according to the present invention can be used protectively and curatively.
- [0051] As a rule the aqueous SC according to the invention comprises 200 to 800 g/L, preferably 300 to 700 g/L, in particular 350 to 650 g/L of water.
- 30 [0052] In a particularly preferred embodiment according to this invention the non-aqueous SC essentially consists of
- (a) 75 to 350 g/L, preferably 100 to 300 g/L of one or more crop protection active compounds, in particular a compound of formula I;
 - 35 (b) 75 to 450 g/L, preferably 100 to 300 g/L of one or more adjuvants selected from the group consisting of alkoxy-lated amines, alkylpolyglycosides and alkenyl succinic anhydride digluconamides.
 - (c) at least one surfactant selected from the groups (c1) and (c2):
 - (c1) 5 to 25 g/L, preferably 7.5 to 20 g/L of one or more non-ionic dispersant;
 - 40 (c2) 10 to 50 g/L, preferably 15 to 40 g/L of one or more anionic dispersant;
 - (d) 0 to 75 g/L, preferably 0.5 to 60 g/L of an anti-freezing agent;
 - (e) 0 to 5 g/L, preferably 0.5 to 5 g/L of a defoamer;
 - (f) up to 10 g/L, preferably 0.5 to 5 g/L of one or more preservatives,
 - 45 (g) 300 to 700 g/L water, and
 - (h) up to 30 g/L, preferably 0.5 to 15 g/L of one or more structure agents, preferably Xanthan gum such as Rhodopol® 23 from Rhodia and/or hydrated silicates such as Attagel® 50 from Engelhard Corp. or Veegum® T from Vanderbilt Export Corp..
- 50 [0053] The adjuvants (b) according to the invention, the pesticidal active compounds (a) and dispersants (c) and water and optionally one or more anti-freezing agents (d) and/or defoamers are processed to suspension concentrates according to the invention by well-established procedures. These procedures include intensive mixing and/or milling of the active ingredients with the other substances, such as solvents, wetting agents, and adjuvants. The form of application such as spraying, atomizing, dispersing or pouring may be chosen like the compositions according to the desired objectives and the given circumstances.
- 55 [0054] Suspension concentrates according to the present invention are usually produced so as to obtain a stable, non-sedimenting flowable product and usually contain 5 to 40% w/v active ingredient, 5 to 50% w/v adjuvant, 0.5 to 17.5% w/v of dispersing agents, 0 to 15% w/v antifreezing agent, 0 to 10% w/v of suspending agents such as protective

colloids and thixotropic agents, 0 to 2.5% w/v preservatives, 0 to 10% w/v of other additives such as defoamers, corrosion inhibitors, stabilizers, penetrants and stickers, and an organic liquid in which the active ingredient is substantially insoluble.

[0055] Preferred anti-foam agents (e) are silica, polydialkylsiloxanes and mixtures thereof, in particular Rhodorsil® 416, Rhodorsil® 426R or Rhodorsil® 454 from Rhodia. Particularly preferred is a combination of polydimethylsiloxanes and perfluoroalkylphosphonic / perfluoroalkylphosphinic acids.

[0056] The term preservatives (f) includes chemical stabilizers to prevent decomposition of the compound of formula I during storage such as alkaline earth and transition metal sulfates and biocides, in particular bactericides such as Proxel® GXL (Zeneca)

[0057] In a preferred embodiment the crop protection compound (a) is air-milled optionally in the presence of dispersant (c2) before admixing the components (b) to (g) and optionally (h).

[0058] The finished non-aqueous suspension concentrates according to the invention are stable in storage, i.e. even on storage over a relatively long period. Although phase separation may occur upon storage due to sedimentation of the active ingredient, no aggregates are formed. The SCs according to the present invention allow the inclusion of high loadings of one or more adjuvants in a one-pack formulation with a pesticide and, therefore, offer the advantage of an optimized and easy-to-use formulation of the crop protection active compound. The separate addition of an adjuvant by the end-user before application has therefore become unnecessary.

[0059] Aqueous dispersions and emulsions, for example compositions obtained by diluting the formulated product according to the invention with water, also lie within the scope of the invention.

[0060] As a commodity the compositions may preferably be in a concentrated form whereas the end user generally employs diluted compositions. The compositions may be diluted to a concentration down to 0.001% of active ingredient. The doses are usually in the range of 0.01 to 10 kg a.i./ha.

[0061] For a more clear understanding of the invention, specific examples are set forth below. These examples are merely illustrations and are not to be understood as limiting the scope and underlying principles of the invention in any way. Various modifications of the invention in addition to those shown and described herein will become apparent to those skilled in the art from the following examples and foregoing description. Such modifications are also intended to fall within the scope of the appended claims.

[0062] Examples of aqueous suspension concentrates according to the invention are shown in the following examples A to M:

Glucopon 600CSUP (Henkel)	Adjuvant	C ₁₂₋₁₄ alkylpolyglycoside in water
Glucopon 215CSUP (Henkel)	Adjuvant	C ₈₋₁₀ alkylpolyglycoside in water
Laponite RDS (Solvay Alkali GmbH)	Structure agent	Sodium Magnesium Silicate and Tetrasodium Phosphate
Morwet D425 (Witco)	Dispersant	Alkyl-naphthalene sulfonic acid formaldehyde condensate
Pluronic PE10500 (BASF)	Dispersant	Ethyleneoxide/propyleneoxide block copolymer
Proxel GXL (Zeneca)	Biocide	aqueous dipropylene glycol solution containing 20 % 1,2-benzisothiazoli-3-one

55

Name	Function	Identity
Rhodopol 23 (Rhodia)	Structure agent	heteropolysaccharide having a molecular weight of about 2,000,000 g/mol
Atplus ADG 1001 (Uniqema)	Adjuvant	C ₁₂ alkenyl succinic anhydride diglucamide
Atplus ADG 1201 (Uniqema)	Adjuvant	50 % C ₁₂ alkenyl succinic anhydride diglucamide in propylene glycol
SAG 220 (Witco Surfactants)	Defoamer	Polydimethylsiloxane emulsion
Silicon Antifoam TP 20 (OSi Specialities GmbH)	Defoamer	Polydimethylsiloxane emulsion
Silica FK 320 (Degussa AG)	Defoamer	Amorphous silica
Rhodorsil 426 R (Rhodia)	Defoamer	polydimethylsiloxane emulsion
Soprophor FL (Rhodia)	Dispersant	Ammonium polyary(phenyl) ether phosphate
Supragil MNS/90 (Rhodia)	Dispersant	Sodium naphthalene sulfonate formaldehyde condensate
Vanisperse CB (Lignotech, Norway)	Dispersant	Sodium ligninsulfonate
Veegum T (Vanderbilt Exp. Corp., USA)	Structure agent	Hydrated magnesium aluminium silicate
Veegum Pro (Vanderbilt Exp. Corp., USA)	Structure agent	Trimethamine magnesium aluminium silicate
Synperonic 91-6 (Uniqema)	Adjuvant	alcohol ethoxylate

Examples 1 to 3

[0063] The following SC formulations according to the invention are prepared by mixing the ingredients with the exception of the structure agent, the antifreeze agent and the adjuvant in a dissolver. Subsequently, the suspension is milled using a Dyno-mill. The adjuvant is then stirred into the milled suspension. Subsequently, a suspension of the structure agent and the antifreeze agent is produced and also stirred into the milled suspension.

[0064] Alternatively, the structure agent can be added to the un-milled suspension and milled together with the active ingredient.

[0065] The obtained SC formulations are compared with similar SC formulations (C-1 and C-2), in which the adjuvant (b) was replaced by n-octylpyrrolidone or an alcohol ethoxylate (Synperonic 91-6)

[0066] The following formulations are obtained:

Ingredient	Concentration (g/L)				
	Example				
	1	2	3	C-1	C-2
BB-4	200	200	200	200	200
Morwet D425	20	20	20	20	20
Pluronic PE 10500	10	10	10	10	10
Proxel GXL	2	2	2	2	2
Rhodosil 426R	2	2	2	2	2
Rhodopol 23	3	3	3	3	3
Propylene glycol	50	50	50	50	50
Agsol Ex8	-	-	-	50	-
Synperonic 91-6	-	-	-	200	250
Atplus 450	250	-	-	-	-
Atplus 469	-	250	-	-	-
Atplus ADG 1201	-	-	250	-	-
Water	to 1L	to 1L	to 1L	to 1L	to 1L

[0067] The density, and the particle size distribution upon storage for two weeks at room temperature (RT), at 40 °C (2W40 °C) and at 54 °C (2W54 °C) of the SC formulations are shown in the following table I:

Table I

Properties		Example				
		1	2	3	C-1	C-2
Density	[g/mL]	1.106	1.121	1.116	1.078	1.085
Particle size	x_{10} [μm]	0.74	0.74	0.76	0.88	0.74
distribution	x_{50} [μm]	1.92	1.92	1.98	3.19	1.95
(RT)	x_{90} [μm]	4.83	4.78	5.00	6.77	4.77
Particle size	x_{10} [μm]	0.73	0.74	0.73	1.04	0.82
distribution	x_{50} [μm]	1.87	1.88	1.89	3.73	2.28
(2W40 °C)	x_{90} [μm]	4.56	4.50	4.70	7.59	5.44
Particle size	x_{10} [μm]	0.74	0.76	0.74	1.39	1.00
distribution	x_{50} [μm]	1.90	1.96	1.88	5.07	2.89
(2W54 °C)	x_{90} [μm]	4.51	4.42	4.49	10.16	6.54

[0068] Whereas the particle size distribution of the formulations according to the present invention is constant upon storage at elevated temperature, the particle size increases drastically with alcohol ethoxylates as adjuvants alone or with an N-alkylpyrrolidone.

Examples 4 to 6

[0069] The following SC formulations according to the invention are prepared analogously to examples 1 to 3.

[0070] The following formulations are obtained:

	Concentration (g/L)		
	Example		
Ingredient	4	5	6
BB-4	200	200	200
Morwet D425	20	20	20
Pluronic PE 10500	10	10	10
Proxel GXL	2	2	2
Rhodorsil 426R	2	2	2
Rhodopol 23	3	3	3
Propylene glycol	50	50	50
Agrimer 15	250	-	-
Fluowet PL80		70	-
Atplus 430	-	-	250
Water	to 1L	to 1L	to 1L

[0071] The density, and the particle size distribution upon storage for two weeks at room temperature (RT), at 40 °C (2W40 °C) and at 54 °C (2W54 °C) of the SC formulations are shown in the following table II:

Table II

		Example		
Properties		4	5	6
Density	[g/mL]	1.141	1.100	1.121
Particle size	x_{10} [μm]	0.75	0.76	0.75
distribution	x_{50} [μm]	1.98	2.04	1.95
(RT)	x_{90} [μm]	4.98	5.39	4.02
Particle size	x_{10} [μm]	0.73	0.76	0.74
distribution	x_{50} [μm]	1.86	2.03	1.90
(2W40 °C)	x_{90} [μm]	4.55	5.26	4.09
Particle size	x_{10} [μm]	0.75	0.75	0.75
distribution	x_{50} [μm]	1.92	2.03	1.95
(2W54 °C)	x_{90} [μm]	4.55	5.38	4.01

[0072] The particle size distribution of the formulations according to the present invention is constant upon storage at elevated temperature.

Example 7

[0073] The following SC formulation according to the invention is prepared analogously to Examples 1 to 3. It is compared with a similar SC formulation (C-3), in which the adjuvant (b) was replaced by a polyoxyethylene sorbitol ester (Tween 80).

[0074] The following formulations are obtained:

Ingredient	Concentration (g/L)	
	Example	
	7	C-3
BB-4	200	200
Monwet D425	20	20
Pluronic PE 10500	10	10
Proxel GXL	2	2
Rhodorsil 426R	2	2
Rhodopol 23	3	3
Propylene glycol	50	50
Atplus 435	250	-
Tween 80	-	250
Water	to 1L	to 1L

[0075] The density, and the particle size distribution upon storage at room for two weeks at temperature (RT), 2 at 40 °C (2W40 °C) and at 54 °C (2W54 °C) of the SC formulations are shown in the following table III:

Table III

Properties		Example	
		7	C-3
Density	[g/mL]	1.111	1.108
Particle size distribution (RT)	x ₁₀ [μm]	0.75	0.75
	x ₅₀ [μm]	1.97	2.27
Particle size distribution (2W40 °C)	x ₉₀ [μm]	4.97	4.64
	x ₁₀ [μm]	0.74	0.84
Particle size distribution (2W54 °C)	x ₅₀ [μm]	1.89	2.27
	x ₉₀ [μm]	4.54	5.40
Particle size distribution (2W54 °C)	x ₁₀ [μm]	0.76	0.98
	x ₅₀ [μm]	1.96	2.74
Particle size distribution (2W54 °C)	x ₉₀ [μm]	4.64	6.26
	x ₁₀ [μm]	0.76	0.98

[0076] Whereas the particle size distribution of the formulations according to the present invention is constant upon storage at elevated temperature, the particle size increases drastically with polyoxyethylene sorbitol esters as adjuvants.

Examples 8 to 12

[0077] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

[0078] The following formulations are obtained:

Ingredient	Concentration (g/L)				
	Example				
	8	9	10	11	12
BB-4	200	200	200	200	200
Monwet D425	20	20	20	20	20
Pluronic PE 10500	10	10	10	10	10
Proxel GXL	2	2	2	2	2
Rhodorsil 426R	2	2	2	2	2
Rhodopol 23	3	3	3	3	3
Propylene glycol	50	50	50	50	50
Berol 381	250	-	-	-	-
Fluorad FC430		100	-	-	-
Fluorad FC129	-	-	100	-	-
Glucopon 600 CSUP	-	-	-	250	-
Glucopon 215 CSUP	-	-	-	-	250
Water	to 1L	to 1L	to 1L	to 1L	to 1L

[0079] The density, and the particle size distribution upon storage for two weeks at room temperature (RT) and at 54 °C (2W54 °C) of the SC formulations are shown in the following table IV:

Table IV

Properties		Example				
		8	9	10	11	12
Density	[g/mL]	1.101	1.105	1.101	1.103	1.085
Particle size	x ₁₀ [μm]	0.72	0.74	0.73	0.73	0.74
distribution	x ₅₀ [μm]	1.97	1.96	1.96	2.05	2.05
(RT)	x ₉₀ [μm]	5.35	5.50	5.52	5.85	5.78
Particle size	x ₁₀ [μm]	0.70	0.70	0.71	0.72	0.72
distribution	x ₅₀ [μm]	1.87	1.84	1.84	1.96	1.92
(2W54 °C)	x ₉₀ [μm]	5.12	5.01	5.00	5.57	5.30

[0080] The particle size distribution of the formulations according to the present invention is constant upon storage at elevated temperature.

Examples 13 to 15

[0081] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3

[0082] The following formulations are obtained:

Ingredient	Concentration (g/L)		
	Example		
	13	14	15
BB-4	200	200	200
Morwet D425	20	20	20
Pluronic PE 10500	10	10	10
Proxel GXL	2	2	2
Rhodosil 426R	2	2	2
Rhodopol 23	3	3	3
Propylene glycol	50	50	50
SCS 3631	250	-	-
Emulgin RT40	-	250	-
Agrimer 30	-	-	100
Water	to 1L	to 1L	to 1L

[0083] The density, and the particle size distribution upon storage for two weeks at room temperature (RT) and 2 weeks at 54 °C (2W54 °C) of the SC formulations are shown in the following table V:

Table V

Properties		Example		
		13	14	15
Density	[g/mL]	1.126	1.107	1.104
Particle size	x ₁₀ [μm]	0.72	0.72	0.73
distribution	x ₅₀ [μm]	2.03	1.95	2.98
(RT)	x ₉₀ [μm]	5.77	5.44	5.50
Particle size	x ₁₀ [μm]	0.70	0.71	0.70
distribution	x ₅₀ [μm]	1.88	1.91	1.84
(2W54 °C)	x ₉₀ [μm]	5.14	5.45	4.96

[0084] The particle size distribution of the formulations according to the present invention is constant upon storage at elevated temperature.

Examples 16 to 18

[0085] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

Ingredient	Concentration (g/L)		
	Example 16	Example 17	Example 18
Dimethomorph	375	375	250
Soprophor FL	15.6	15.6	7.8
Bevaloid 6338	1.9	1.9	1.3
Proxel GXL	0.9	0.9	0.7
Propylene glycol	50	50	33
Rhodopol 23	1.7	1.7	1.1
Fluowet PL80	250	-	-
Atplus 469	-	250	-
Glucopon 215 CSUP	-	-	500
Water	to 1 liter	to 1 liter	to 1 liter
Density (g/mL)	1.16	1.15	1.12

Examples 19 to 21

[0086] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

Ingredient	Concentration (g/L)		
	Example 19	Example 20	Example 21
Metconazole	100	100	100
Vanisperse CB	13.3	13.3	13.3
Rhodorsil 426R	0.6	0.6	0.6
Proxel GXL	0.8	0.8	0.8
Propylene glycol	64	64	64
Rhodopol 23	1.4	1.4	1.4
SCS 3631	100	-	-
Atplus 469	-	100	-
Glucopon 215 CSUP	-	-	100
Water	to 1 liter	to 1 liter	to 1 liter
Density (g/mL)	1.11	1.09	1.08

Examples 22 to 24

[0087] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

Ingredient	Concentration (g/L)		
	Example 22	Example 23	Example 24
Picolinafen	125	150	125
Supragil MNS/90	7.5	9	7.5
Geropon T36	6.3	7.5	6.3
Rhodorsil 426R	0.5	0.6	0.5
Proxel GXL	0.3	0.3	0.3
Citric Acid	3.0	3.6	3.0
Propylene glycol	25	30	25
Rhodopol 23	1.25	1.5	1.25
Agrimer VA7W	500	-	-
Atplus 469	-	400	-
Glucopon 215 CSUP	-	-	500
Water	to 1 liter	to 1 liter	to 1 liter
Density (g/mL)	1.10	1.11	1.07

Example 25

[0088] The following SC formulation according to the invention is prepared analogously to Examples 1 to 3

Ingredient	Concentration (g/L)
Pendimethalin	300
Agrimer 15	250
Soprophor FL	45
Arkopal N-80	38
Veegum T	4.5
Silicon Antifoam TP 20	5.6
Proxel GXL	0.75
Silica FK 320	3.8
Water	to 1 liter
Density (g/mL)	1.13

[0089] The SCs described in the examples 16 - 25 show insignificant particle growth when stored for 2 weeks at 54°C (2 weeks at 40°C for example 25). When the adjuvant is replaced by the equivalent amount of alcohol ethoxylate (e.g. Synperonic 91-6), unacceptable particle growth is observed in all cases.

Examples 26 to 28

[0090] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

Ingredient	Concentration (g/L)		
	Example 26	Example 27	Example 28
BB-4	350	300	300
Morwet D425	30	20	20
Pluronic PE 10500	15	10	10
Atplus 469	437.5	375	375
Rhodosil 426R	2	2	-
SAG 220	-	-	5
Proxel GXL	2	2	2
Laponite RDS	1	-	-
Rhodopol 23	-	1	0.35
Veegum Pro	-	-	2.5
Water	to 1 liter	to 1 liter	to 1 liter
Density (g/mL)	1.20	1.17	1.16

[0091] The SCs described in the examples 26 - 28 show insignificant particle growth when stored for 2 weeks at 54°C

Example 29

[0092] The following SC formulations according to the invention are prepared analogously to Examples 1 to 3.

Ingredient	Concentration (g/L)
BB-4	300
Morwet D425	75
Pluronic PE 10500	10
Atplus 469	375
SAG 220	10
Proxel GXL	3
Rhodopol 23	0.45
Veegum Pro	2.5
1,2-propylene glycol	50
Water	to 1 liter
Density (g/mL)	1.19

[0093] The SC described in example 29 shows insignificant particle growth when stored for 2 weeks at 54°C and 8 weeks at 40 °C

Claims

1. An aqueous, concentrated suspension (SC) for crop protection active compounds which comprises

- (a) 50 to 400 g/L of at least one crop protection active compound;
 (b) 50 to 500 g/L of at least one adjuvant, which has the capability of reducing the surface tension in the spray dilution to 40 mN/m or lower and does not promote the particle growth of the crop protection active compound;
 (c) at least one surfactant selected from the groups (c1) and (c2):

- (c1) 5 to 75 g/L of one or more non-ionic dispersants, and
 (c2) 10 to 100 g/L of one or more anionic dispersants,

- (d) up to 150 g/L of one or more anti-freezing agents,
 (e) up to 25 g/L of one or more defoamers,
 (f) up to 25 g/L of one or more preservatives, and
 (g) 200 to 800 g/L of water,

wherein the adjuvant (b) is selected from the group consisting of amine alkoxyates, polyoxyalkylene triglycerides, alkylpolyglycosides, alkenyl succinic anhydride derivatives, polyvinylpyrrolidones, perfluoroalkyl acids derivatives, and mixtures thereof.

2. A SC in accordance with claim 1 wherein the crop protection active compound (a) comprises a benzoylbenzene of formula I

wherein

- R¹ represents a halogen atom, an optionally substituted alkyl, alkanoyloxy or alkoxy group; or a hydroxy group,
 R² represents a halogen atom, an optionally substituted alkyl group,
 R³ represents a halogen atom or an optionally substituted alkyl group,
 m is 0 or an integer of 1 to 3;
 R⁴ independently represents a halogen atom, an optionally substituted alkyl or alkoxy group or a nitro group;
 R⁵ represents an optionally substituted alkyl group;
 R⁶ represents a halogen atom, a cyano, carboxy, hydroxy or nitro group or an optionally substituted alkyl, alkoxy, alkenyl, alkylthio, alkylsulphinyl, alkylsulphonyl or amino group;
 R⁷ represents a halogen atom or a nitro group, an optionally substituted alkyl, alkoxy, alkenyloxy, alkynyloxy, alkylthio, cycloalkyl, cycloalkyloxy, aryloxy group; and
 n is 0, 1 or 2.

3. A SC in accordance with claim 1 comprising 75 to 450 g/L of at least one alkylpolyglycoside, at least one amine ethoxyate or at least one alkenyl succinic anhydride digluconamide.
4. A SC in accordance with claim 1 comprising 55 to 150 g/L of at least one perfluoro(C₆₋₁₈)alkylphosphonic acid, perfluoro(C₆₋₁₈)alkyl-phosphinic acid or a mixture thereof.
5. A SC in accordance with claim 1 wherein the ratio of the crop protection active compounds (a) to said adjuvant (b) is between 1 : 0.5 and 1 : 100, preferably between 1 : 0.75 and 1 : 10.
6. A SC in accordance with claim 1 comprising in addition to the components (a) to (g): (h) 0.1 to 30 g/l of at least one

thickener.

7. A SC in accordance with claim 1 wherein the non-ionic dispersant (c1) is a block copolymer which consists of a polyoxypropylene and polyoxyethylene moieties.
8. A SC in accordance with claim 1 wherein the anionic dispersant (c2) is an amino sulfonate or an alkali or earth alkali sulfonate.
9. A method for the enhancement of the efficacy of crop protection active compounds which comprises combining said crop protection active compounds with an effective amount of at least one adjuvant, which has the capability of reducing the surface tension in an aqueous spray dilution to 40 mN/m or lower being selected from the group consisting of amine alkoxylates, polyoxyalkylene triglycerides, alkylpolyglycosides, alkenyl succinic anhydride derivatives, polyvinylpyrrolidones, perfluoroalkyl acids derivatives, and mixtures thereof.
10. A method for combating a fungus at a locus which comprises diluting a formulation as claimed in any of the claims 1 to 8 with water and treating said locus with the obtained diluted aqueous formulation.

CATEGORY OF CITED DOCUMENTS		T : theory or principle underlying the invention E : earlier patent document, but published on, or after the filing date D : document cited in the application I : document cited for other reasons A : member of the same patent family, corresponding document	
X : particularly relevant if taken alone Y : particularly relevant if combined with another document of the same category A : technological background O : non-written disclosure P : intermediate document			

EPO FORM 1500 (01/99) (PROCT)

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 00 30 0669

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on the patent document. The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
